

performing said recording only if a responding message giving said authorisation is received and recognized by said first telecommunications device in response to said requesting message.

2. (Amended) A method of prohibiting the recording of information exchanged between first and second telecommunications devices, said recording being performed under control of said first telecommunications device, wherein the method comprises the steps of:

sending from said first telecommunications device to said second telecommunications device a message requesting authorisation for the recording, and

prohibiting said recording if a responding message giving said authorisation is not received and recognized by said first telecommunications device in response to said requesting message.

3. (Amended) A method according to claim 1, sending said requesting message as a voice message.

4. (Amended) A method according to claim 1, wherein the method comprises the step of: sending said responding message giving authorization from said second telecommunications device under control of a user of the second telecommunications device.

5. (Amended) A method according to claim 1, wherein the method comprises the step of: sending said responding message giving authorisation from said second telecommunications device automatically.

6. (Amended) A method according to claim 1, wherein the method comprises the step of:  
advising a user of said first telecommunications device of whether a responding message  
giving authorisation for recording is received.

7. (Amended) A method according to claim 1, wherein said information is further  
exchanged between said first telecommunications device and at least one additional  
telecommunications device, and that said recording is only performed if a responding message  
giving said authorisation is also received from said at least one additional telecommunications  
device.

8. (Amended) A telecommunications device for exchanging information with other  
telecommunications devices, said telecommunications device being equipped to perform a recording  
of said exchanged information, wherein the telecommunications device can assume a mode in which  
it is adapted to:

send to another telecommunications device a message requesting authorisation for the  
recording of information to be exchanged with said other telecommunications device, and

perform said recording only if a responding message giving said authorisation is received in  
response to said requesting message.

9. (Amended) A telecommunications device according to claim 8, wherein the telecommunications device comprises:

speech recognition means to detect whether the responding message in response to said requesting message, in case the responding message is a voice message, gives said authorisation.

10. (Amended) A telecommunications device according to claim 8, wherein the telecommunications device comprises:

means for advising a user of the device of whether a responding message giving authorisation for recording is received.

11. (Amended) A telecommunications device according to claim 8, wherein the telecommunications device is further adapted to allow said recording if a general authorisation for the recording has been received and stored in the device.

12. (Amended) A telecommunications device according to claim 8, wherein the device is a mobile telephone.

13. (Amended) A telecommunications device for exchanging information with other telecommunications devices, wherein the telecommunications device can be programmed to respond automatically to a received message requesting authorisation for the recording of information to be exchanged with another telecommunications device.

Sub B5  
14. (Amended) An electronic accessory device connectable to a telecommunications device for exchanging information with other telecommunications devices, said electronic accessory device being equipped to perform a recording of said exchanged information, wherein the electronic accessory device can assume a mode in which it is further adapted to:

instruct a telecommunications device to which it is connected to send to another telecommunications device a message requesting authorisation for the recording of information to be exchanged between the two telecommunications devices, and

perform said recording only if a responding message giving said authorisation is received in response to said requesting message.

A1  
15. (Amended) An electronic accessory device according to claim 14, wherein the electronic accessory device comprises:

means for advising a user of the device of whether a responding message giving authorisation for recording is received.

Sub B6  
16. (Amended) An electronic accessory device according to claim 14, wherein the electronic accessory device is further adapted to allow said recording if a general authorisation for the recording has been received and stored in the device.
